

-----FLEABUSTERS, INC.-----

Safe, Simple, Honest solutions to your flea control needs-Guaranteed!

Dear Valued Client,

Your yard has now been treated with the Fleabusters Biobusters NON-TOXIC Outside service. You are now on your way to a flea free yard. Biobusters Nematodes are microscopic worms created by nature as a natural enemy to the flea. As cities grew the food supply for this type of Nematode became scarce leaving the opportunity for fleas and other undesired insects to take over. By growing this specific type of nematode and introducing them into flea infested areas in large numbers we can effectively eliminate the fleas safely around your home. The nematodes will quickly multiply and eliminate the fleas around your home. Once this occurs they again exhaust the food supply and will soon die off too. Once the nematodes are gone the yard no longer has protection and any introduction of fleas into the yard can create an infestation. Fleas are often introduced into yards by a cat with fleas walking on a fence line, rodent, squirrels, pets and even people who unknowingly will walk into the yard with fleas on their clothing. Fleas have incredible senses that allow them to detect warm blooded mammals from long distances. They are able to jump up 3 to 7 feet at a time allowing them to cover great distances and land on their desired meal. In California fleas can live just about everywhere and no yard is safe. A simple walk by your neighbor's yard could quickly lead to fleas infesting your yard or home. Once the yard becomes infested the home usually follows quickly. Infestations inside the home can be harder to spot and tend to go undetected giving them time to grow substantially before they are noticed. If you home is protected by Fleabusters Inside Treatment then you have nothing to worry about. If not and you have or had fleas in your yard watch the inside carefully. The sooner an infestation is caught the easier it is to eliminate. If you have any additional questions feel free to ask your technician or call our office @ 1-800-765-3532.

With the application now complete the Nematodes specifically grown for Fleabusters are busy at work seeking out and killing the fleas in your yard. The Nematodes grown specifically for Fleabusters are busy attacking undesired insects in the yard. This type of nematode has no affect on trees, shrubs or gardens. They will not harm Lady Bugs, Bees, Earthworms or any of the other beneficial insects found in our yards all working to keep our plants healthy and disease free.

Biobusters Nematodes attack and kill all types of fleas. The nematodes effectively kill all four stages of the flea making it the most effective method of flea elimination anywhere. They will seek out the fleas and begin killing them immediately. Results are typically visible 2 to 7 days following an application, depending upon the degree of the infestation. Keeping the ground moist will help the nematodes when they burrow into the soil looking for fleas. During the summer months a standard yard should be watered 3 to 4 times a week depending on the weather and the thickness of your particular yard. The desired effect is to prevent the ground from becoming completely dry which would slow the process of the nematodes. Watering cycles can be adjusted during the winter, spring and fall depending upon rain, temperature and type of soil. The simplest test is if you can push your finger down into grass and easily penetrate

the soil then it is sufficiently moist. If the soil is dry and cracking then an increase in watering would be called for.

The nematodes will typically keep the yard free of fleas for 4 to 8 weeks. To keep the yard flea free it should be sprayed on a monthly basis. Yards sprayed on a year around monthly basis are guaranteed to remain flea free, see your guarantee or ask your customer service representative for details. Services can also be established for 6 week intervals, 8 week intervals or on request depending on which option is best for your situation and budget.

Avoid using toxic chemicals in the yard for 72 hours prior to or following a Biobusters application. Normal yard care or products for grass will have no effect and can be used without regard when the nematodes were applied. If a toxic product must be used within the 72 hour window contact our office using either the website contact page or by telephone (800) 765-3532 to see if your specific product will cause any issues and how we can best manage your situation.

Remember the Nematodes are NON-TOXIC and harmless to children and pets! Nematodes are one of the only items the EPA classifies as NON-TOXIC so there is never a danger to your children or your pets. Whether your pet is healthy or very ill, young or old these nematodes present absolutely no risk to any member of your family, only the fleas bothering them.

Thank you for your confidence in Fleabusters. By following the simple instructions above your yard will soon be flea free. By having the outside service done each month you will never have fleas in your yard again!

Fleabusters also offers one of the safest, most effective inside services. Fleabusters has been safely treating the inside of homes for over 40 years. The inside service is a 1 YEAR MONEY BACK GUARANTEE. The most effective method to eliminate fleas is to have Fleabusters treat the inside of your home as a preventive measure. This will guarantee you will never get fleas inside and keep your family safe and comfortable. Remember, Fleas are not just irritating to our pets, but can also carry diseases causing serious illnesses such as Typhus in people. Fleas can cause large vet bills due to flea dermatitis, flea anemia and many other illnesses faced by pet owners each year. When it comes to fleas, an ounce of prevention really is worth a pound of cure! Of course the right cure becomes critical here. With the topical products (Frontline, Advantage, Generics, Etc.) showing ever higher failure rates causing pet owners to increase dosages and risks, fleas developing immunities to the ever increasing use of pesticides, only one company remains as effective today as it did 40 years ago, Fleabusters! The Fleabusters process dehydrates the fleas. Just as it is impossible for us to become immune to the effects of dehydration, the same can be said about fleas. Don't wait until after you have spent hundreds...maybe even thousands of dollars on products and services that don't work trying to get rid of your fleas. Contact Fleabusters today. The Information is free! The Quote is Free! Even the phone call is Free! The biggest difference, we guarantee results or your money back!
