

## FLEABUSTERS PREPARATION INSTRUCTIONS

Clear all loose items from carpeting, clothes, shoes, books, toys, etc.. In hardwood rooms please clear any loose items from the baseboards and area rugs.

Treating the carpets can be dusty. In bedrooms it is a good idea to place loose items on bed and cover entire bed with sheet. You can also place any difficult to dust items under the sheet too.

Cover all computer equipment and any other dust sensitive electronics that are in rooms with wall to wall carpet or area rugs. You may also want to cover or put away any difficult to dust items.

If you have birds, reptiles, or rodent type pets (hamster, rat, guinea pig etc.), move them to a room that will not be treated as the dust can bother their tiny respiratory systems.

Cover any fish tanks and turn off pump during application

## AFTER TREATMENT INSTRUCTIONS

Wait approximately 24 hours before vacuuming any carpeting.

Change the bag in your vacuum or empty the canister and rinse the filters after first vacuuming. Vacuum as normal after that.

Hardwood floors can be swept and/or damp mopped right away. Please don't vacuum baseboards for at least 6 weeks

It can take up to 6 weeks for the fleas to be completely gone. They go into a pupae (cocoon) stage that can not be penetrated. So we have to wait for them to hatch out and dehydrate. The eggs and larvae will dehydrate immediately. It takes approximately 4 to 10 days to dehydrate the adult fleas. As new pupae hatch out they will also dehydrate. They can still bite during this time.
